1: Holmberg--37 [2] (1941-42) 1950 Siriono
116, 177, 249, 276

"Just when the Siriono adopted tobacco is not known, although it certainly does not seem to have been aboriginal with them. As already mentioned, one of my oldest informants said that it was received from the whites while he was still a child, which would date its adoption by this particular group of Siriono at some time within the last 60 or 70 years. (The literature tells us nothing on this point). Other informants at Casarabe, however, told me that when there was no tobacco available other leaves were smoked, but what these were I was never able to determine. The forest Siriono with whom I lived at Tibaera saved seed and planted tobacco regularly with the rest of their crops, and they smoked no other kind of leaf. Wild tobacco, moreover, does not grow in the area."
